

Secured Safevault Application

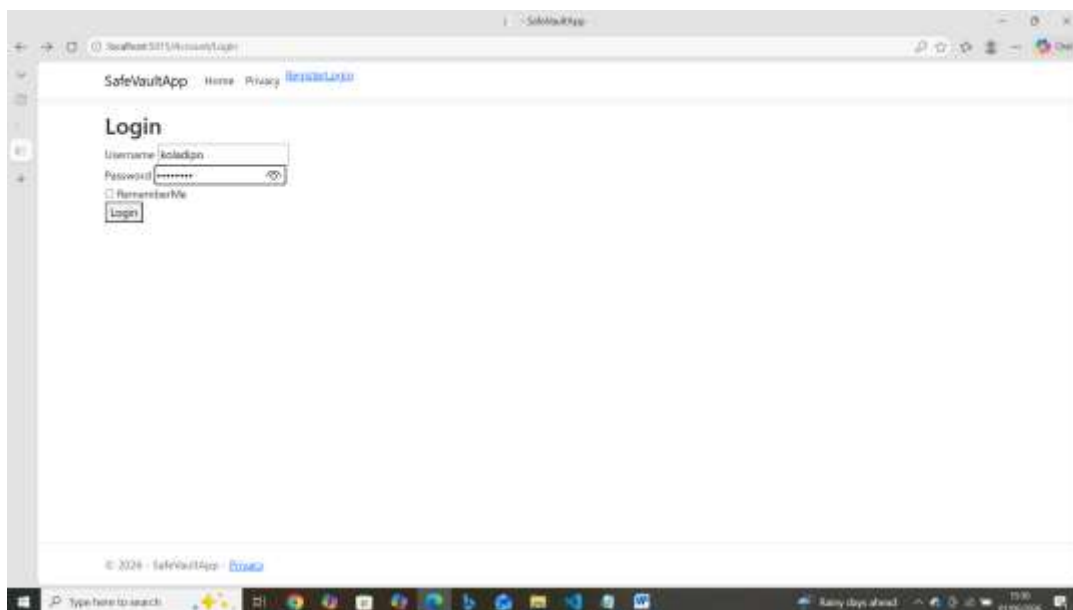

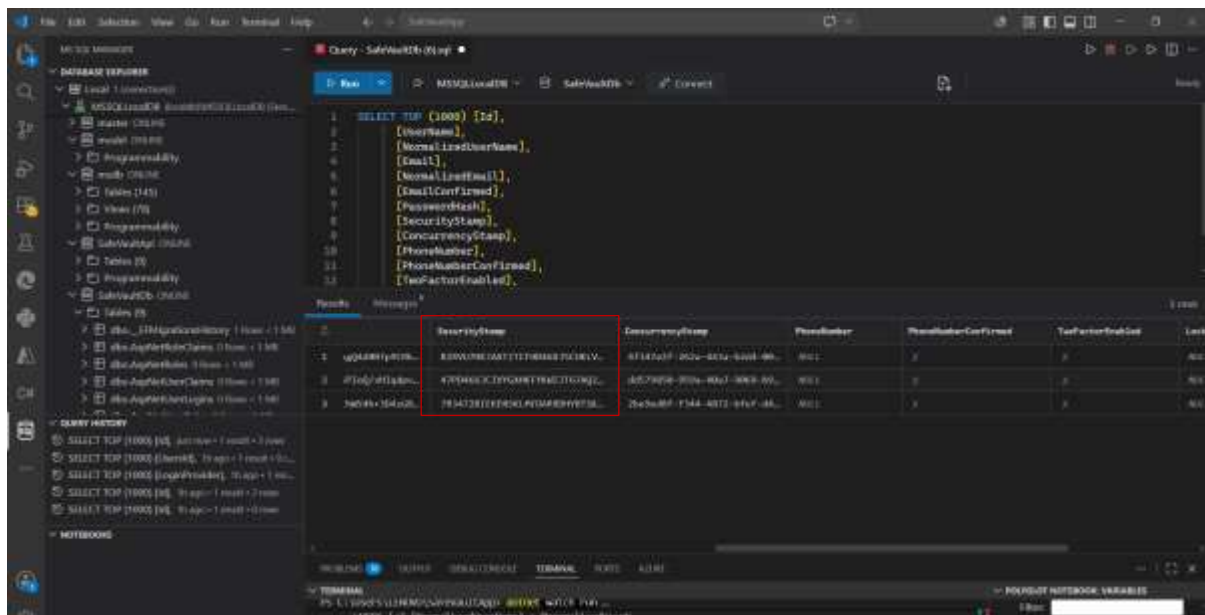

The hashed password stored in the database.

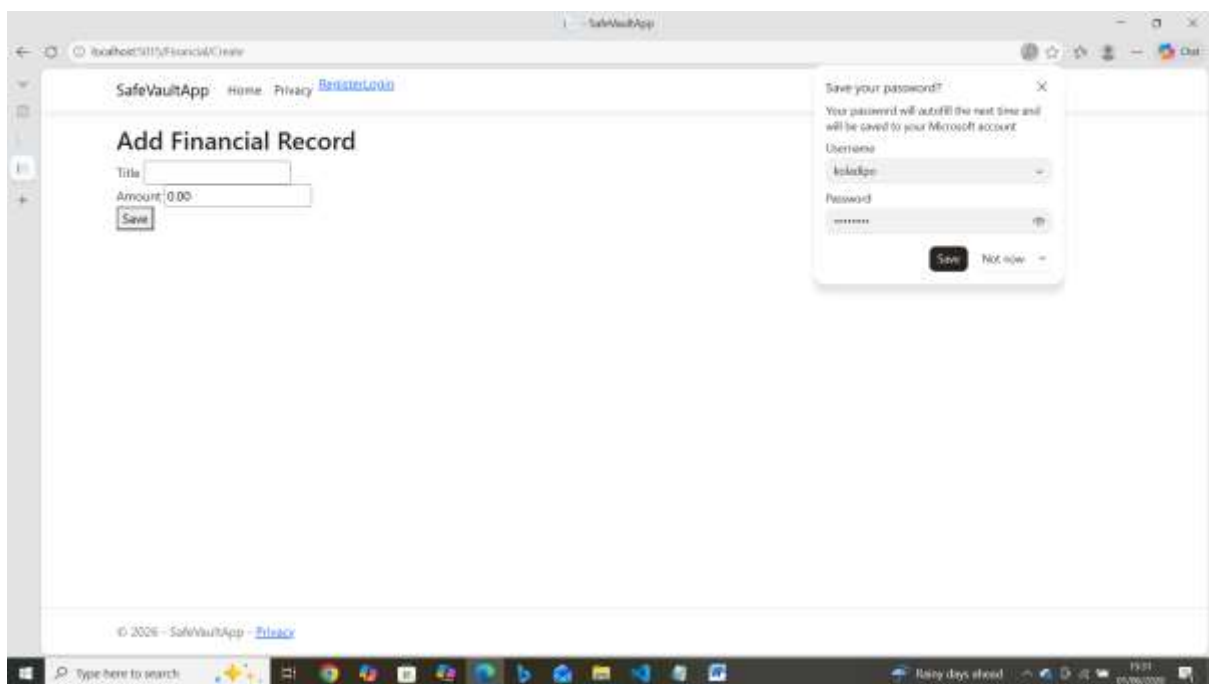

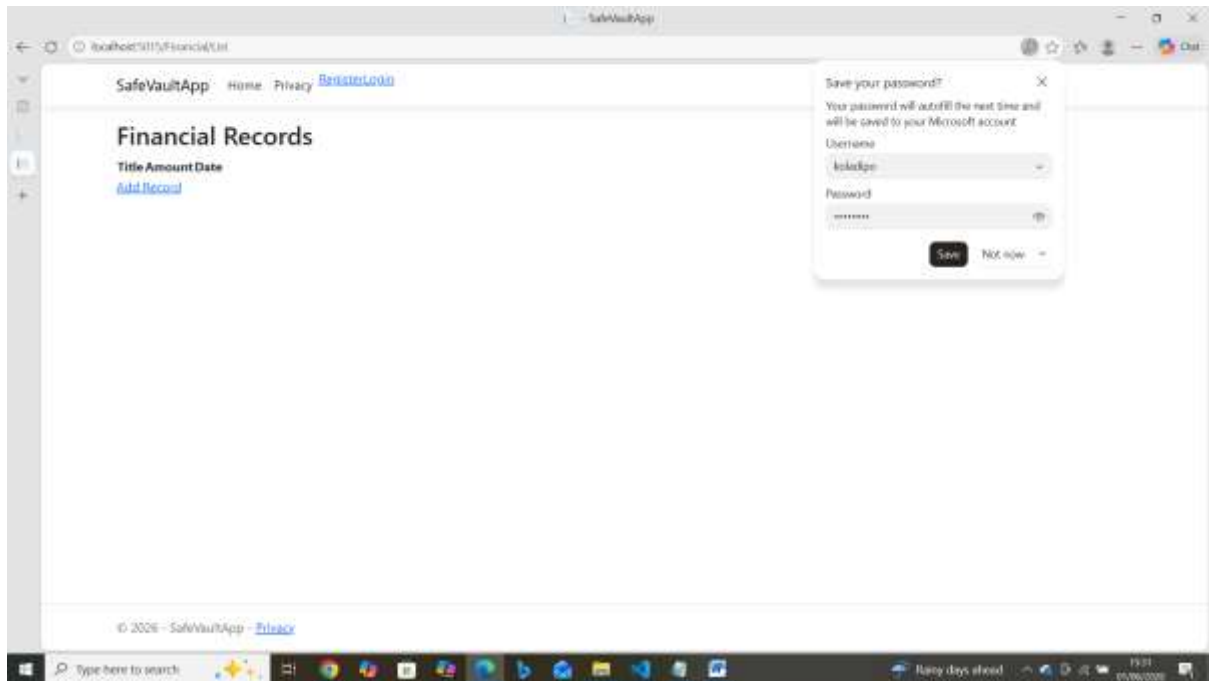

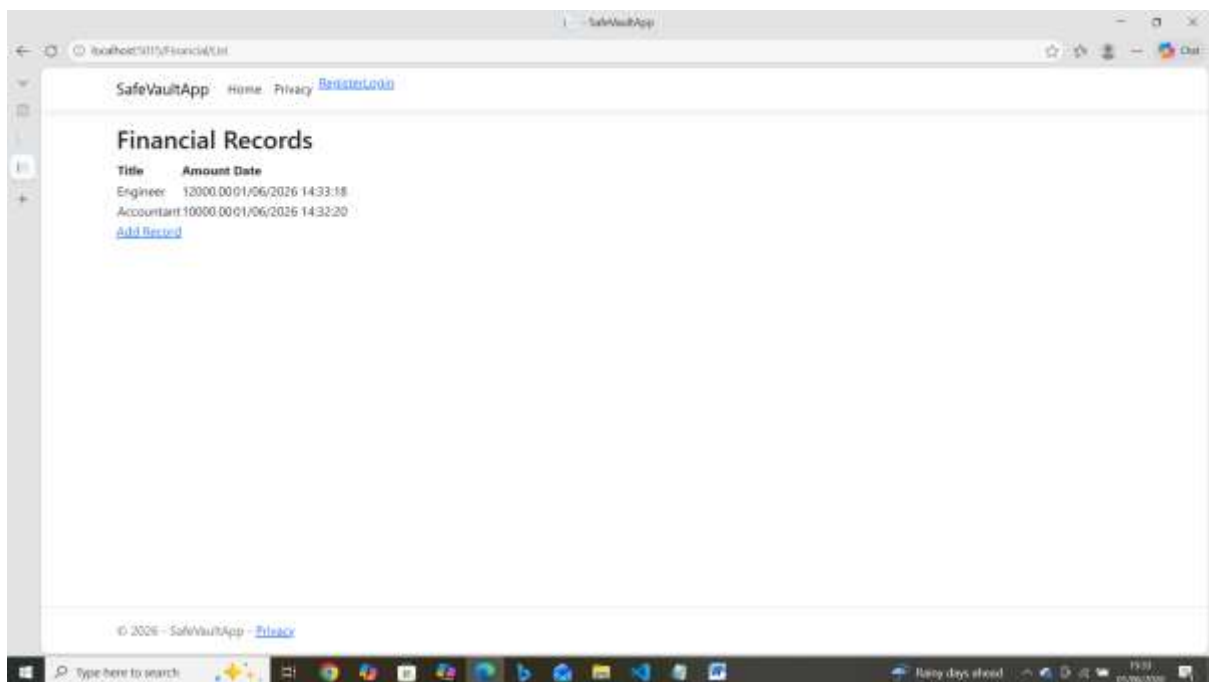

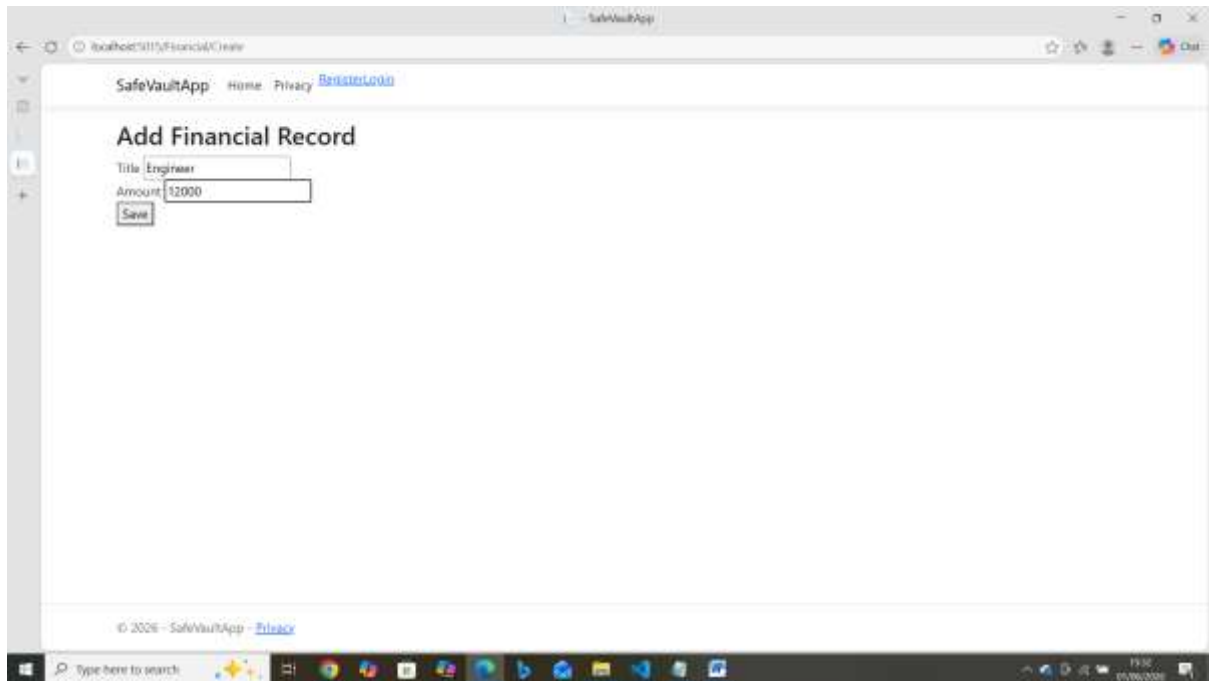

Data

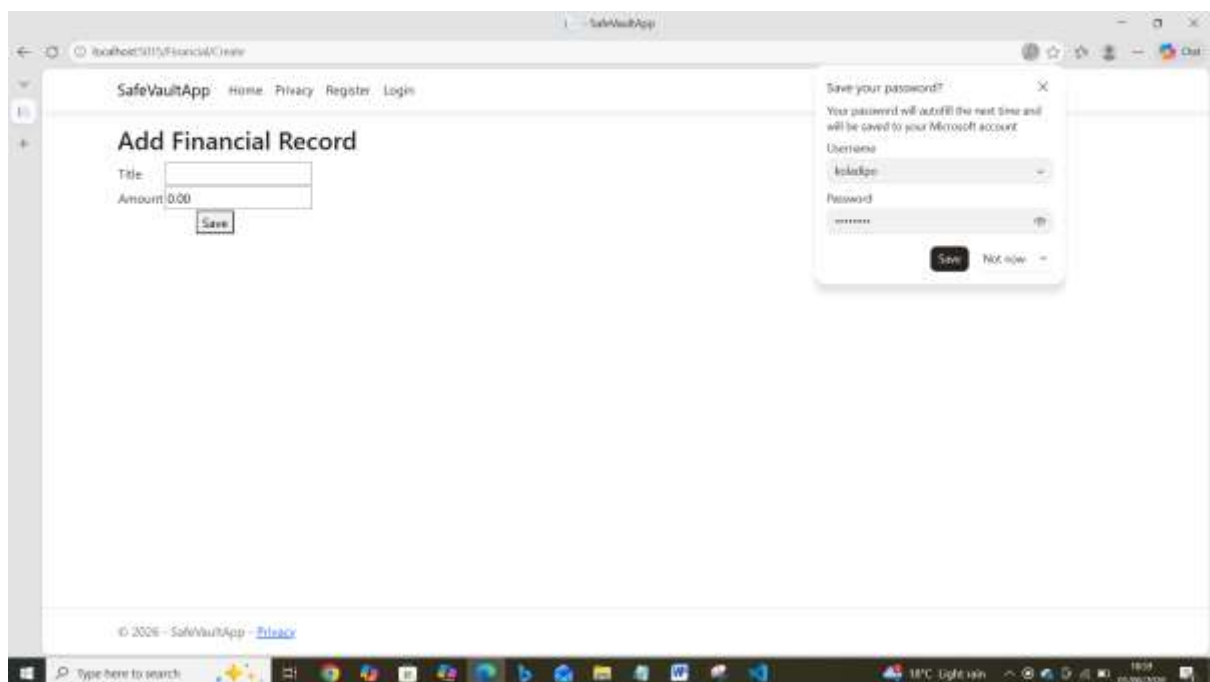

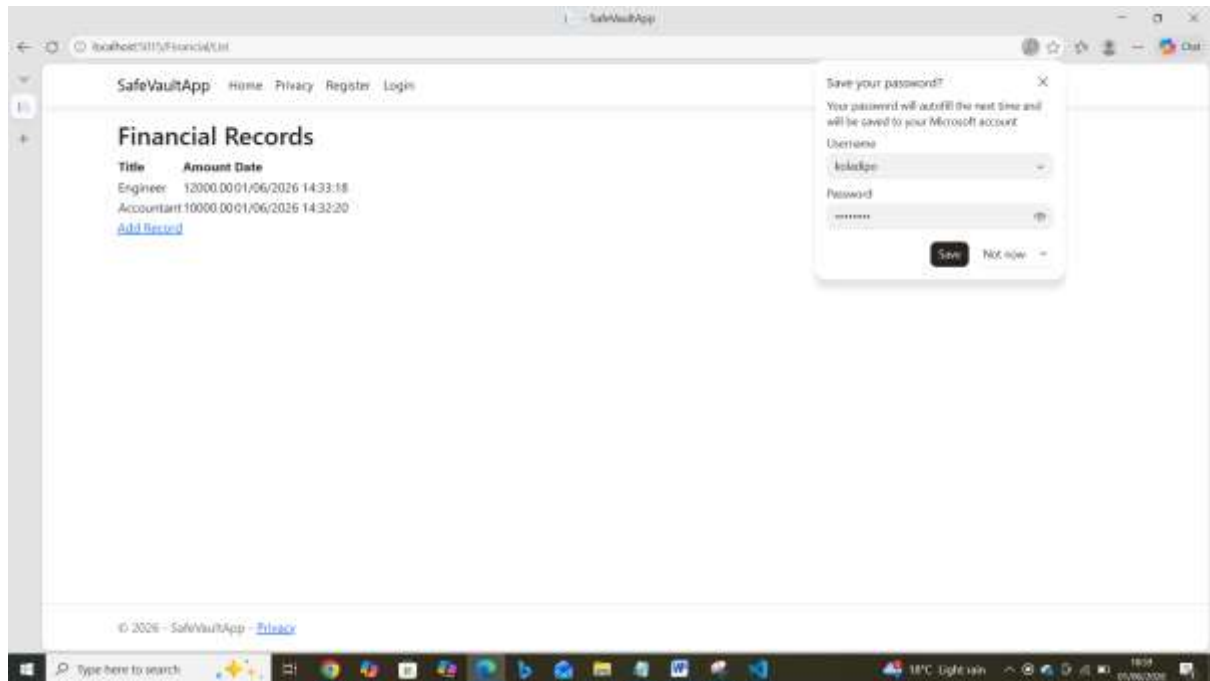

stored securely in the database.

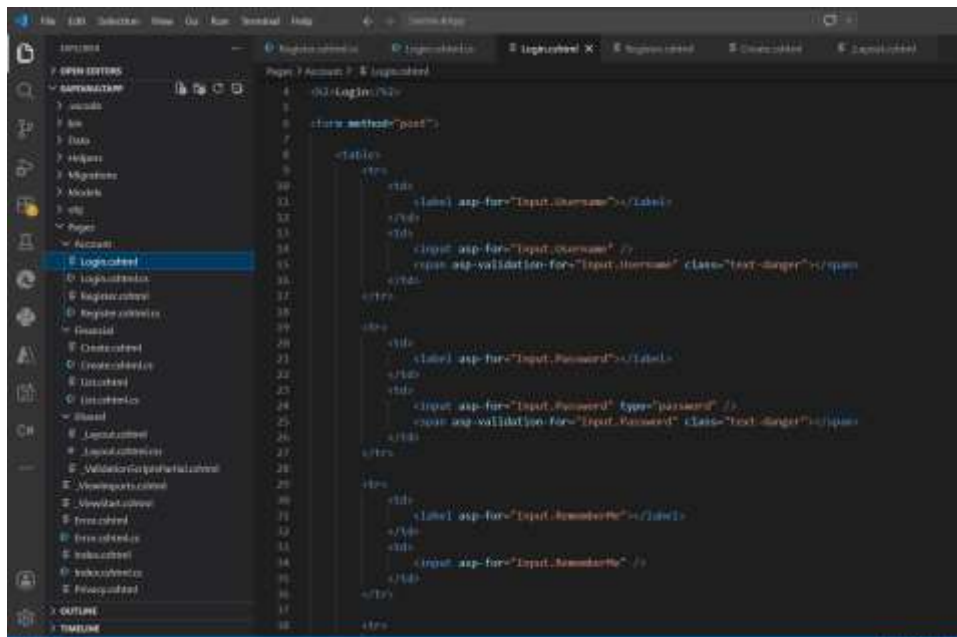

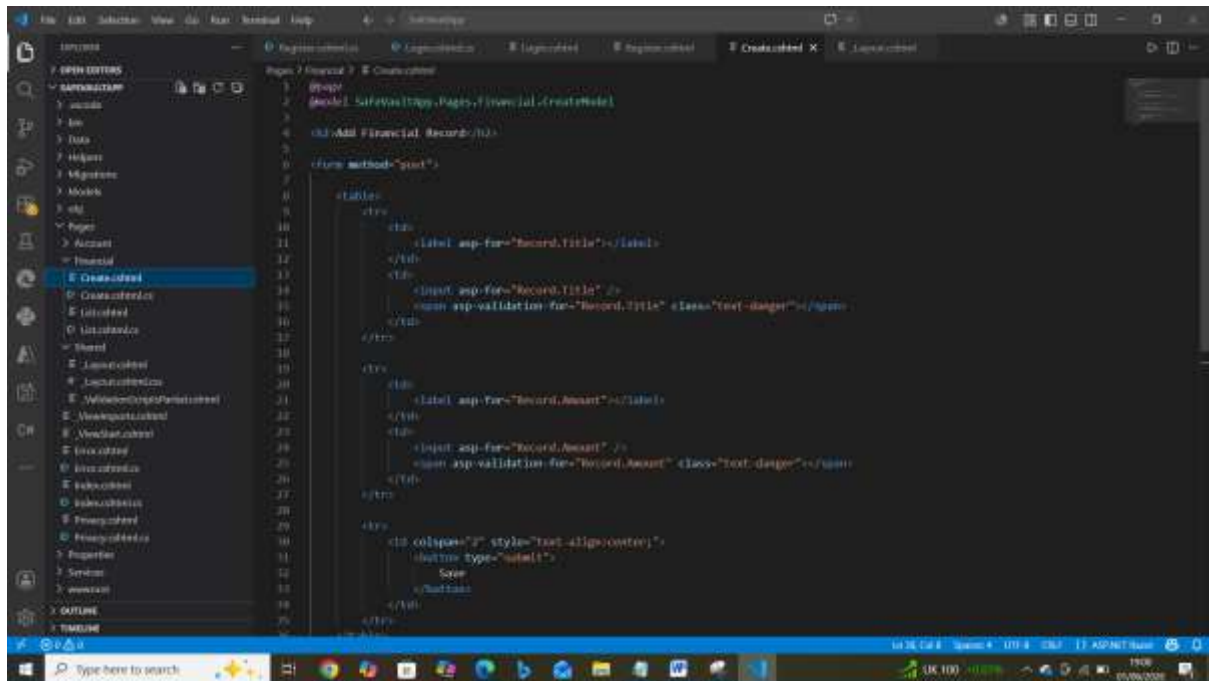

Secure data records stored in the database. (in red square)

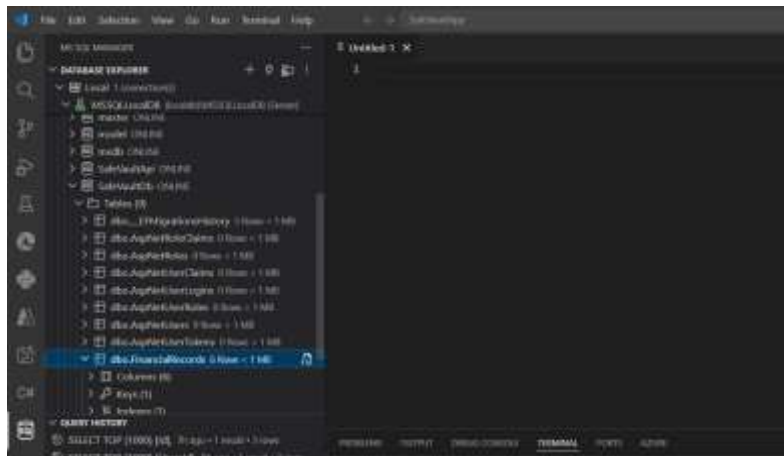

I encrypted financial data before storing them in the database.

Best practice

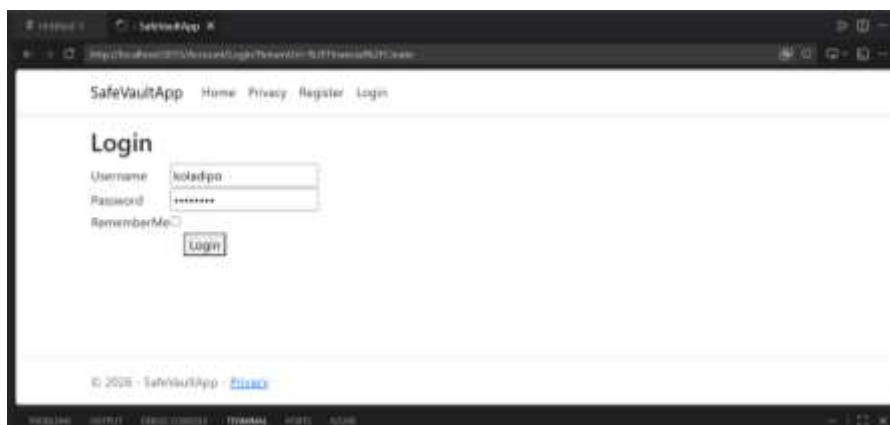

Don't store raw sensitive values (like amounts or notes). Use **AES encryption**.

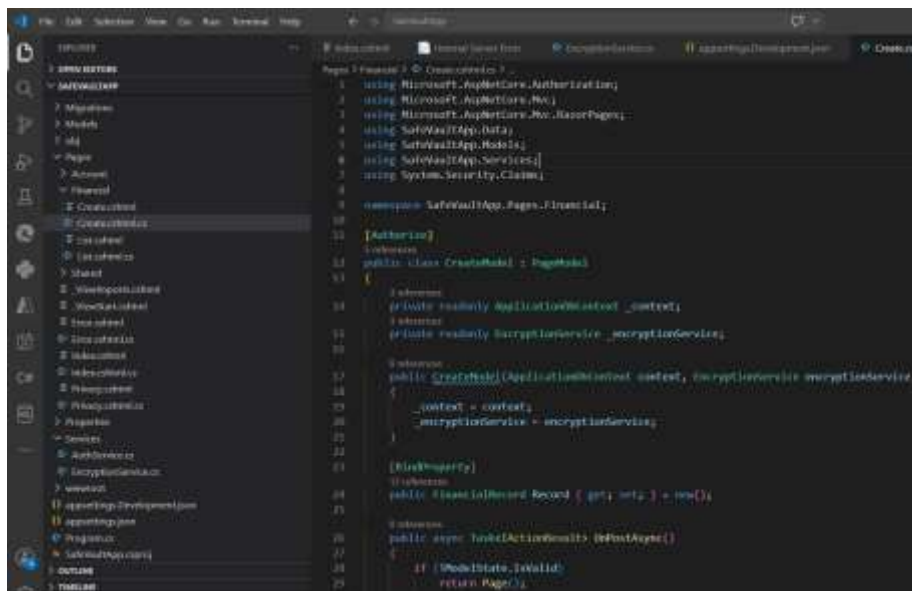

Figure 1. The effect of the number of nodes on the number of iterations required to reach the optimal solution for the 1000 nodes problem.

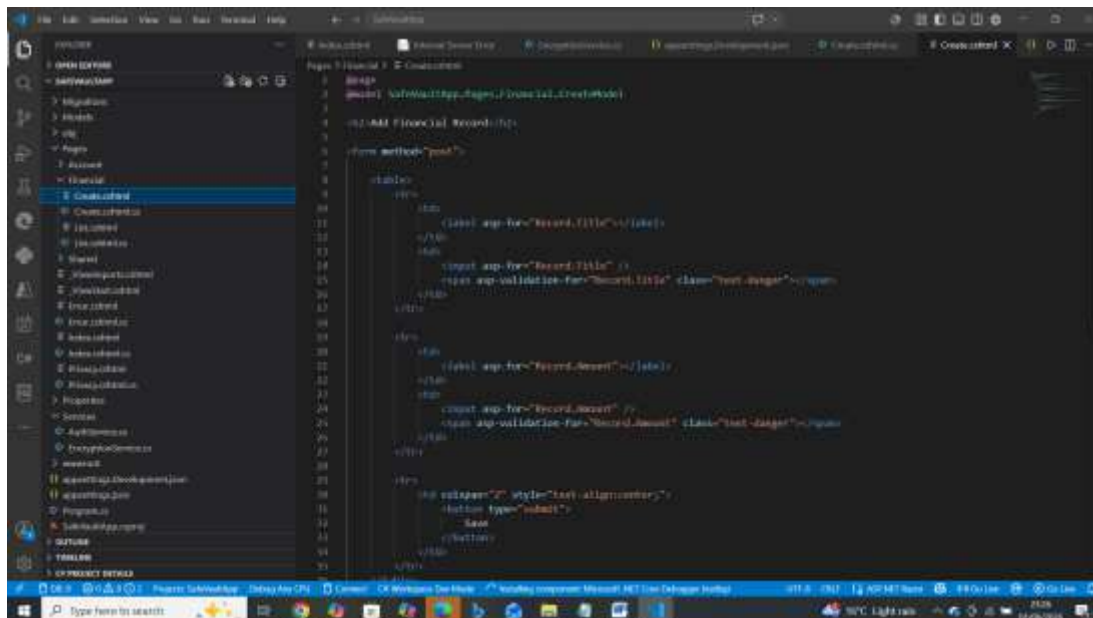

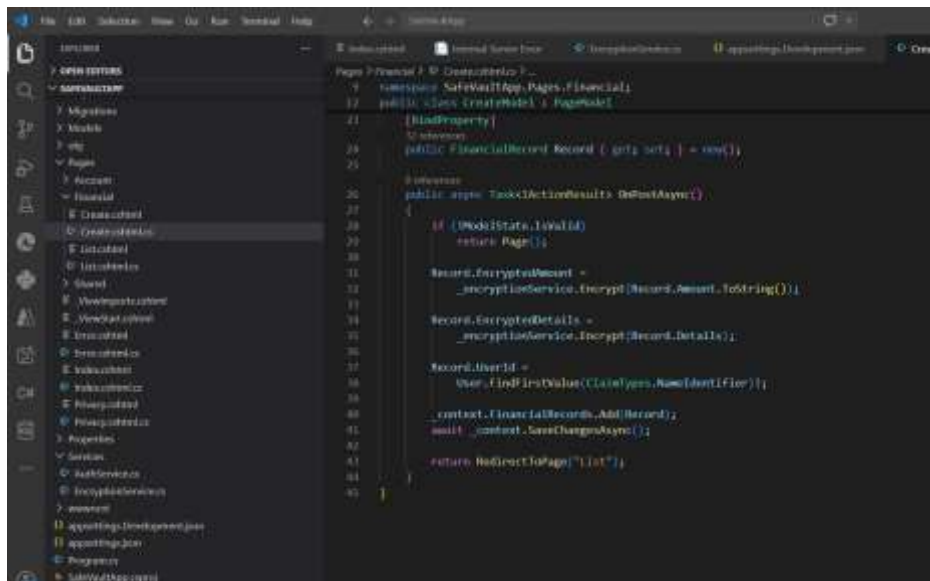

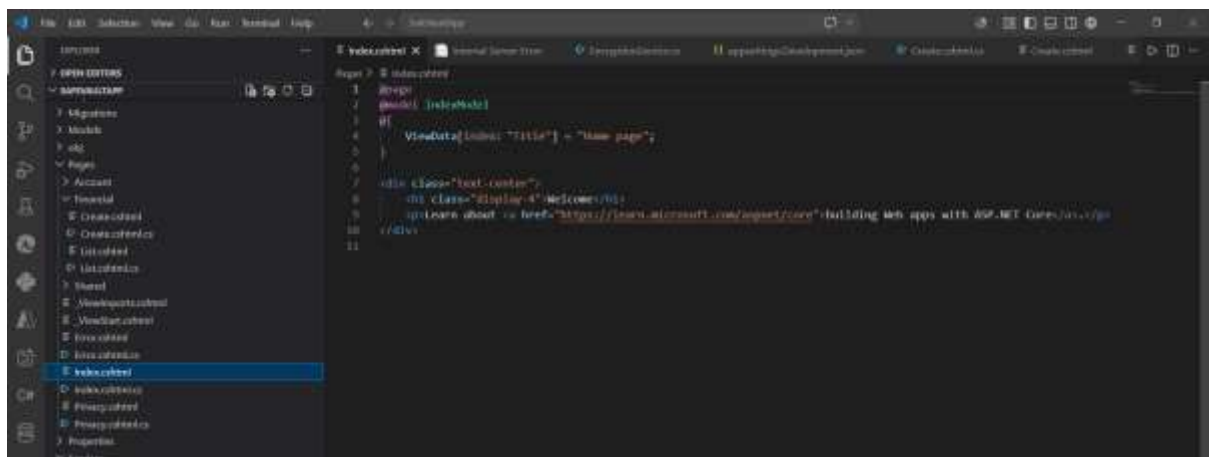

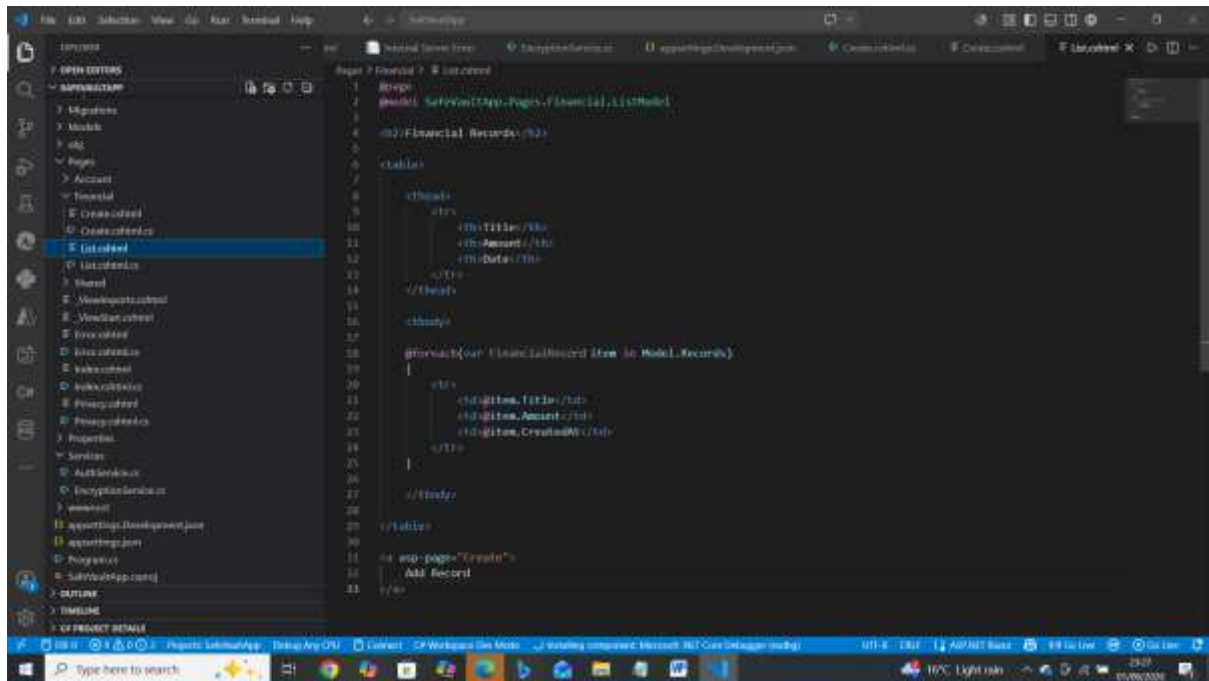

The login with masked password
